

Cyber Security for Small Business

Is your business safe from a cyber attack?

Small business is a target for cyber criminals. A successful cyber attack can disrupt your businesses operations causing lost revenue and unhappy customers. In a worst case scenario you could even go out of business.

When was the last time you checked your defences?

Most attacks can be stopped or mitigated by implementing basic measures, but the majority of small businesses are not aware of weaknesses in their defenses until its is too late. Taking a proactive approach to identifying where your defences must be improved can save you the cost of cleaning up after a cyber attack.

What we do

Identify your
critical information
assets

Assess the strength
and effectiveness of
your security

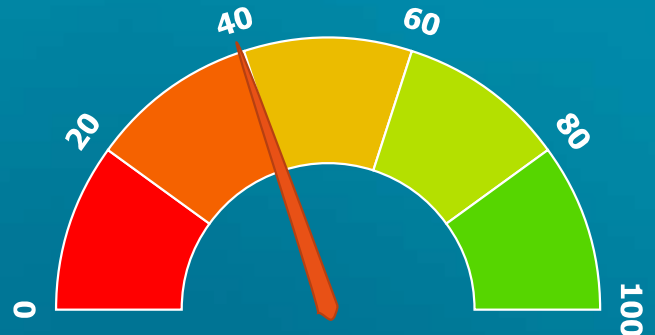

Build strategies
and plans to
mitigate your risk

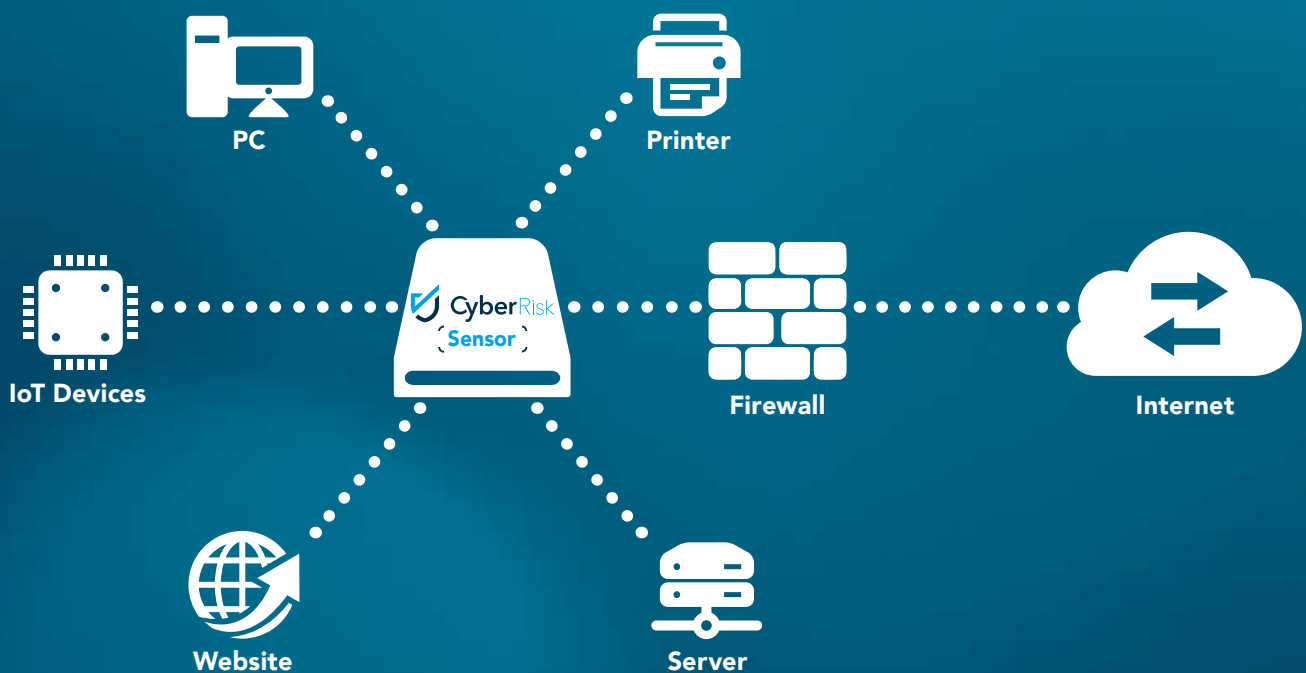

Deploy the
right security
measures

Calculate Your Cyber Risk Score

Using our CyberRisk Sensor we scan your network and any attached devices and calculate your CyberRisk Score. Your CyberRisk Score shows the health and effectiveness of your defenses across 3 key areas. We provide you an easy to read and understand report that identifies weaknesses in your website, your network and any devices you might have attached to it.

What we check

Benefits

You will receive a **comprehensive assessment** of the health of your defenses against a cyber attack. If you outsource the management of your IT systems to an external provider, an assessment is a great way to see how well your supplier is doing their job at keeping you safe from a cyber attack.
